Summary

12 years of experience in Development and Support in healthcare and banking domain delivering complex projects in global team settings. With expertise in all areas of Software Development Life Cycle including requirement gathering, development, designing, coding, testing, implementation and support in both Agile and Waterfall development model, thriving under fast paced, challenging environment working under pressure. Having strong technical problem-solving abilities while being adaptable on the job, providing business values within the stipulated timeframes is quite critical in both domain as new laws and compliances need to be met without incurring fines.

Constant learner, certified Professional Scrum Master, Tableau Desktop specialist and a post graduate Diploma holder in Data Analytics for Business which have honed my Project Management, Storytelling and Leadership skills.

Core Competencies

Languages

- Cobol
- JCL
- CICS
- Db2
- SAS
- REXX
- IMS
- MySql

Tools

- NDVR
- Rally
- Jira
- CA7
- MQ
- RMDS
- Expediter
- Kafka
- GDGs/VSAM
- OPC
- Strobe
- Splunk
- IBM IDz
- Insync
- Service Now
- Spool
- Dbvisualizer
- DLI
- File Aid
- Abend Aid

Certifications:

- Professional Scrum Master-1
- Tableau Desktop Specialist

Work Experience

TD Bank, London, Ontario **Nov 2024 – Present**
Software Engineer II (Senior Software Engineer)

FDM Group, London, Ontario **Oct 2022 – Nov 2024**
Mainframe Engineering Consultant *deployed at TD bank*

TD Bank has the vision to be the better bank with the purpose to enrich lives of customers, communities, and colleagues. Worked in their in-house Managed Customer Loans application within core platform which deals with Mortgages and Loans support. This is a Mainframe application leveraging Cobol, JCL, SAS, IMS & Db2.

Key Achievements

- Successfully developed domain knowledge on banking for Loan and Mortgage system.
- Remediated various customer irritants including issues in the customer shared documentation which could have caused compliance issues for bank by not adhering to customer disclosures.
- Automated customer document re-generation process resulting in saving of 2 Million CAD which used to be a manual process.
- Ability to adjust and re-prioritize tasks and deliverables due to super agile kanban pod where business directions could change as frequently as multiple times a day with possibility of an incident superseding everything else.
- Excellent time and product management skills ensuring that delivery and stakeholder commitments are met and not delayed due to on-coming production incidents.

- Handling application on call for Five applications within the first 6 months of joining the application without any prior banking information.
- Prevented major issues in production which would have become a P1/P2 due to bad error logging in a job critical to the nightly batch processing with emergency over the night changes in Prod.
- Leveraged excellent analytical skills to identify and fix the various existing gaps in Mortgage and Loan processing preventing customer dissatisfaction and preventing overhead of various technical and business teams involved in helping the customer.

Responsibilities

- Enhanced product as a Senior Mainframe Application Developer in application leveraging COBOL,JCL, SAS with IMS and db2 as databases.
- Performed duty as Cobol Developer to enhance application as per Project specifications.
- Designed technical specification documents based on Business requirements for the developers in the team to follow and code.
- Supported application to maintain business as usual in prod by identifying and fixing issues and irritants to business and customers.
- Supported responses to FCAC for remediations and breaches in line with banks fiduciary responsibility for Mortgages and Loans.
- Maintained application 24*7 application availability as part of L3 support while being on permanent on call rotation.
- Supported application during Business hour for IMS front end screen availability and smooth daily nightly batch execution by monitoring critical jobs and creating pipeline and automated alerts and procedures for smooth execution.
- Able to work in ever changing priorities of the kanban pod with flexible deliverables, customer generated requests and system incident reprioritization to ensure the SLAs are met for each.
- Attended to time sensitive Business critical requests catering customer satisfaction and risk mitigation.
- Adept in both Kanban and Scrum agile models.
- Supported Sox and external audits for the application by sharing data generated by Ad Hoc requirements based SAS or regeneration of info to support the audit controls.
- Performed Veracode scan for every enhancement to maintain code quality and compliance.
- Responsible for performing Unit and System testing; supporting User acceptance testing by coordinating with Business and preparing the Acceptance test environment to help them validate.
- Expert in leveraging tools such as Sort, FileAid, Insync, Abend Aid, DLI Logs, DB Visualizer, IMS Db, Spufi, and IP Switch to perform the task at hand efficiently to reduce turnaround time.
- Keep all stakeholders apprised of the product development progress and ensure timelines are met.
- Analyzed and debugged application code to identify and fix bugs using IDz debugger.
- Performed root cause analysis for failures and Incidents by analyzing abend logs, DLI Dumps to future impacts and permanent resolution.
- Ensured that risks are raised in a timely manner so that they can be planned or mitigated accordingly without impacting the product development.
- Maintained application Incidents within Service now cross application impacts and Jira procedures for regular request for information and non-critical requests from business partners.
- Remediated discrepancies within the CA7 schedule of jobs due to the complex nature of batch and its schedule on regular basis to prevent any downtime and downstream impact.
- Developed , tested, deployed, and validated the code in production as per the Business requirements.
- Guided existing team on regular basis on application and technical aspects of application and domain.
- Trained new resources within the Canada location and new offshore resources.

United Health Group / Optum Global Solutions, Gurgaon, India/NJ, USA **Oct 2011 – Apr 2021**
Associate Software Engineering Manager, Technology

UnitedHealth Group is a health care and well-being company with a mission to help people live healthier lives. Optum Global Solutions is the subsidiary of the United Group and takes cares of its technical needs. Worked in their in-house application Claims Highway which helps pre-adjudicate health insurance claims. The Application is a combination of Mainframe technology (Cobol, JCL, online CICS, MQ & Db2) Java Springboot Webservices/APIs and IBM ODM. Lead developer and resource manager for nine resources simultaneously leading a scrum team.

Key Achievements

- Successfully led and migrated the legacy application and its data on Mainframe in tune of $50 Million annual TCO to cloud Openshift platform using JAVA and MySQL technologies.
- Successfully led and developed Fraud detection of claims which were submitted with stolen provider information, saving the organization 100+ Millions each year in claim pay outs.
- Excellent stakeholder management skills, dealing with all aspects of daily project management, risks and issues and global stakeholders which led him to productionize EOB mandate in a timely manner while interacting and co ordinating with 22+ applications preventing fines of 25K per member per month for entire organization saving Millions each month.
- Received a total of 5 MAKE IT HAPPEN, the most prestigious award in UHG presented once a year and selected from across entire UHG portfolio for contribution in Optum Technology.
- Received LIVE leadership award for leadership and guiding resources continuously.
- Awarded Team United by CFO for contributions and collaboration with cross application and save Business 10 million.
- Received multiple awards over the years for individual contribution, leadership, and team contributions.

Responsibilities

- Relentless analytical person applying analytical, design, and technical skills to supervise entire software development lifecycle.
- Led the migration from Mainframe (Batch and Online) to Distributed (Java Spring Boot APIs).
- Planned the migration plan by gathering requirement from Business and design the roadmap with IT owners and various application stakeholders.
- Effective hands-on leader with outstanding success in developing robust software applications which can perform and meet the business' specific requirements.
- Planned Sprint and Backlog to maintain the team velocity and deliver most story points.
- Managed a team of 9 US and India resources from both Application Development and Devops teams seasoned in Mainframe Cobol or Java or combination of them.
- Performed people management activities such as approving time sheets, leave management and workload balancing.
- Collaborated with 25+ Applications on daily basis as upstream/Downstream Applications.
- Adept in both Agile and Waterfall development model.
- Enhanced product as a Senior Mainframe Application Developer & Java Microservices /Springboot RESTful API Developer in a project generating revenue of Two million per month.
- Developed Kibana and Grafana Dashboards to share real time reports with Business.
- Created ETL pipelines of data leveraging Elastic Search, MYSQL, DB2, MQ, Kafka and Mainframe Datasets to view the data in either Kibana or Grafana Dashboards.
- Performed duties as Cobol Developer, Java Springboot RESTful API developer, Devops and QA in the agile team during migration.
- Evaluated requirements to design application and decide tech stack as either Mainframe Cobol or Java RESTful API.
- Perform entire SDLC life cycle ranging from gathering requirements, designing the applications, developing, maintaining, and supporting the same in production.

- Enhanced application performance and reduced application cost of operation using Strobe reports and DB2 explains.
- Estimated project cost and submit Business cases in case of opportunities for Lean improvements.
- Maintained Quality of Cobol programs Deployed code in Production 24*7 as per client policy.
- Tuned and Debugged application code to identify and fix bugs using expeditor.
- Submitted Bright ideas for improvements within application which resulted in more than 20 million USD in application cost saving over the years.
- Acquired or developed infrastructure i.e., DB2, MQ, CICS, MySQL, Openshift Environment and Jenkins Pipeline as per the requirement.
- Maintained quality of developed code using Sonarqube, Fortify Scans, code review and audits.
- Standardized and streamlined development processes by creating checklists, RESTful APIs and performing RCAs.

Education

Data Analytics in Business

St Clair College, Windsor, ON (August 2022, GPA 4.0)

Bachelor of Technology Computer Science (Honors)

Lovely Professional University, Punjab, India (June 2011, GPA 3.14)
